

Consistent therapy in changing environments. More reasons to breathe easy.

-  **Simple**
Easy-to-learn user interface, configurable to the care environment
-  **Connected**
Integrates into electronic medical records and connects wirelessly to the cloud*
-  **Portable**
15 hours of battery life, easily mounts on wheelchairs and has a convenient carrying bag that lets you see the screen and alarms
-  **Adaptable**
Stays with patients as their care settings and needs change
-  **Reliable**
The most robust and durable device we've ever created

Today, health knows no bounds, and neither should healthcare.

Trilogy Evo platform

Transitioning to the future

Advancing respiratory care today

Different care settings. Same clinical technology.

Trilogy EV300 and Trilogy Evo were developed specifically for use in their respective environments. They deliver enhanced performance in noninvasive and invasive ventilation, so patients can be treated with a single device through their hospital stay and as they transition home. Both Trilogy EV300 and Trilogy Evo feature Philips proprietary algorithms AVAPS-AE and digital auto-trak, and invasive ventilation is available with single- and dual-limb circuits and leak compensation. Every Trilogy EV300 and Trilogy Evo includes pressure and volume modes and optional SpO₂ and CO₂ monitoring.

Trilogy EV300 and Trilogy Evo have the same core functionality with the user experience optimized for the care environment.

- Patient experience is the same with every Trilogy EV300 or Trilogy Evo model.
- Easy to use and teach for both hospital and home
- Learn one device and easily operate any device

Introducing Philips Respironics Trilogy Evo platform of ventilators

When you're treating respiratory patients, transitions can occur often, and for any number of reasons. Conditions escalate. Patients are moved. Therapy modes are changed. Each time, patient care is at risk of disruption, causing needless stress on the team.

Trilogy Evo is the only portable life support ventilator platform designed to stay with patients through changes in their condition or care environment. So when transitions do occur, disruptions can be reduced and the level of respiratory care can remain intact.

Using Trilogy EV300 in the hospital environment and Trilogy Evo in the home care environment offers caregivers and clinicians the ability to provide the same patient experience across devices. Making today a much better day for clinicians, caregivers and everyone who depends on them.

Trilogy EV300

- Clinician-friendly user interface
- Clinician interaction is designed to mimic hospital ventilators
- Patient demographic default settings and alarms
- Dedicated ventilation modes for hospital environment
- Field serviceability with standard service tools

Trilogy Evo

- Patient/caregiver-friendly user interface
- Patient limited access setting
- Adjustable patient view
- Ability to save multiple prescriptions
- Dedicated ventilation modes for home environment

Whether transitioning from hospital to home, or as your patient's disease progresses, Trilogy Evo platform of ventilators can provide consistent therapy and a comfortable ventilation experience.
